

# SS型固定式油壓剪

## Side Squeeze Shear 旁邊壓縮油壓剪

### Processes:

Steel Mill Scrap  
Pipe and Plate  
No. 1 Heavy Melting Scrap  
No. 2 Heavy Melting Scrap  
Selected sections of freight cars  
and ship scrap.

side squeeze (SS) shear with lid is designed to confine and compress heavy steel mill scrap, freight car, and ship scrap. It provides maximum productivity through continuous, efficient production while requiring only limited maintenance due to simplicity of operation.

## Standard Features 標準特性

- Flooded suction tanks guarantee pump priming increasing pump life and eliminates dry start-ups.
- Same brand matched pumps are used for optimum flow and pressure.
- Pumps and motors are more accessible with built in drip pan.
- Kidney loop filtration/ cooler pumps are positive displacement type for better filtration and cooling flow.
- Increased use of heavy-duty hoses reduce vibration and noise. Soft shift vents extend pump life by reducing shock and noise in the system.
